

MADE IN GERMANY

Move Sequence.

Tangible fascination.

Light, elegant, transparent: the new trendsetting surface structure gives the successful "Move" range a contemporary dimension. The structure comprises various raised bands – a design which appeals to the sense of touch. Bowls, cups and all other pieces in the collection are real gemstones. They emphasise the character of the Hans Wilhelm Seitz design perfectly with its flowing lines, harmonious proportions and organic forms – innovative and functional design in one.

"Move Sequence" stands for this new lightness of design. With this creation, Arzberg proves once again the fascination porcelain "made in Germany" can command.
